

A NEW GENERATION EVENT-DATA PLATFORM

IOTICS[®]

OUT-OF-THE-BOX INTEROPERABILITY & CONTROL OF YOUR DATA

Don't Duplicate ◆ *Don't Centralize* ◆ *Don't Data Lake*

The Situation

Organizations must overcome fractured and complex data landscapes with the end goal to enable event-driven client-centric business models.

Organizations on this path are tasked with...

- ◆ Breaking down data silos while maintaining security
- ◆ Enabling an event driven architecture to extract actionable insights
- ◆ Ensuring scalability and flexibility for future business requirements

...without breaking the bank

The Challenge: Data Complexity

Data orchestration and management lay the foundation for event-driven analytics and scalable solutions, but the chaos of data landscapes is highly challenging and occasionally business crippling.

Iotics' Solution

Iotics gives you secure decentralized access to all your data with full control. The out-of-the-box interoperability across your existing data landscape, systems, infrastructure and applications to realize the full value of your investments - without duplicating data, creating data lakes, centralizing data or rearchitecting. Selective streaming of event analytics gives you clarity, control and actionable insights across corporate boundaries to accelerate digital transformation.

How it Works

In the patented, lightweight Event-Data Platform, you connect any data source, turn any data into event analytics and selectively stream events to existing or future applications. Built-in semantics adds value to your data and enables autonomous flexible scaling across corporate boundaries to model your enterprise. Deployment is incremental to realize immediate value and roll out to model future business requirements.
